Converter demonstration

tao2typ fixture · 13 October 2026

https://example.org/tao2typ/converter-demonstration/

A self-authored fixture demonstrating mathematics, structure, assets, and comments.

Mathematics and structure

Let $f(x) = e^{-x^2}$. Its Gaussian integral is

$$\int_{-\infty}^{\infty} e^{-x^2}\,dx = \sqrt{\pi} \tag{1}$$

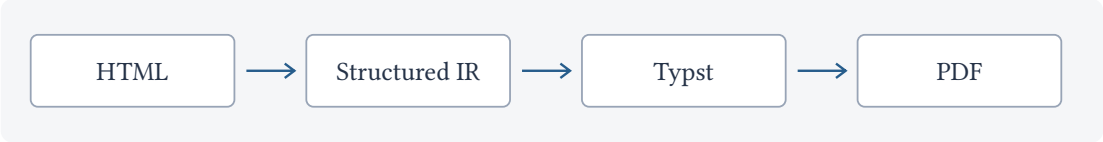

Equation (1) retains its original number and link. Unicode prose also survives: α, β, and the relation x ≥ 0.

> **Proposition 1 (A simple bound).** For every real x, $0 < e^{-x^2} \leq 1$.
>
> *Proof.* The exponent is nonpositive, and the exponential is positive and increasing.

Lists, tables, and images

1. Parse HTML into a versioned intermediate representation.
   - Keep original LaTeX and source links.
   - Keep dates and threaded comments.
2. Render the same representation into readable Typst.
3. Compile to a PDF and record the outcome.

Input	Preserved information
Mathematics	Original LaTeX, display mode, equation number
Images	Source URL, alternative text, local asset mapping
Comments	Author, timestamp, permalink, reply structure

A small local asset accompanies the generated document.

Literal text remains literal

Literal text: `#panic("example")`, [brackets], $currency, and `\frac12`. Formatting: **strong**, *emphasis*, ~~deleted~~, H_2O, and x^2.

```
post = parse_post(html, source_url)
ir_json = post.to_dict()
typst_source = render_post(post, assets)
```

Comments (2)

Example reader · 13 October 2026

The derivative $f'(x) = -2xe^{-x^2}$ should be preserved too.
