Just a quick post to note that the arXiv overlay journal Discrete Analysis, managed by Timothy Gowers, has now gone live with its permanent (and quite modern looking) web site, which is run using the Scholastica platform, as well as the first half-dozen or so accepted papers (including one of my own). See Tim's announcement for more details. I am one of the editors of this journal (and am already handling a few submissions). Needless to say, we are happy to take in more submissions (though they will have to be peer reviewed if they are to be accepted, of course).

I'm glad your proof of the Erdos discrepancy problem is featured in the first "issue"—not only is it a great result, but a lot of the work unfolded online.

Fan · 1 March 2016

What attracts me first on the webpage is the pictures. I keep wondering if there is some deep connection between a paper and the picture beneath it.

I think the website doesn't work on mobiles.

Wow! The DA webpage is slick and spectacular. And it's content is even more impressive! Thanks for sharing! I hope to submit some work there in the near future.
I wish DA and all its staff much success! :-)
