A math rave

Terence Tao · 18 November 2021

https://terrytao.wordpress.com/2021/11/18/a-math-rave/

tao2typ · converted to Typst 2026-10-14 (UTC)

As math educators, we often wish out loud that our students were more excited about mathematics. I finally came across a video that indicates what such a world might be like:

Comments (44)

 **Daniel Goldston** · 18 November 2021

That graph looks more like y= cos(Pi x)

 **Savitha** · 18 November 2021

Funny!!!!

 **ThiKu** · 18 November 2021

Seems to be in Korea.

 Hhan · 18 November 2021

Yeah it's Korean event and held in a famous club Octagon.

 **David Roberts** · 18 November 2021

There is an extended version here: https://www.youtube.com/watch?v=kRFTmJkfeks

 **Anonymous** · 18 November 2021

They desperately need to convert to polar coordinates.

 Sang-il Oum · 18 November 2021

Funny! Another reason to visit Korea again? ;-)
After some search, I found a longer version:

 **Anonymous** · 18 November 2021

Haha, I like it. Thanks Terry :)

 **Maverick S H Oh** · 18 November 2021

Hello! Thank you for your interest!
This happened at the Club Octagon, South Korea, Dec 22, 2021. It was supported and run by KOFAC (government science foundation) and science communicators in the organization. I was one of the science communicators and I contributed on making the background video. We had many other performances/activities too but this video went viral the most 😄
Let me know if you have any questions. Thanks again!

 **Tony Huynh** · 18 November 2021

I assume you mean Dec 22, 2018? Or is this a clip from the future?

Maverick S. H. Oh · 18 November 2021

Ah yeah thanks! It was 2018. I made a critical typo XD... Idk if I can edit my comment. Thanks :)

Anonymous · 18 November 2021

can you supply another website which I can open from the mainland of PRC， thanks~

Maverick Sang-Hyun Oh · 19 November 2021

I do not know of the Chinese restrictions and availability. I guess VPN would help?

Anonymous · 22 November 2021

yes， I think it will be helpful～

Anonymous · 25 May 2024

Hi Maverick,
would be any possibility of getting a copy of the background video/music to recreate this with my students?

Emmanuel Xagorarakis · 19 November 2021

Speaking about math excitement, would you consider am academic publication; the by number theory algorithm of human immortality?
https://sites.math.rutgers.edu/~zeilberg/
In the the Links option,
“another masterpiece by Emmanuel Xagorarakis”
http://sites.math.rutgers.edu/~zeilberg/akherim/Xagorarakis19.doc
Thanks,
Emmanuel Xagorarakis

Emmanuel Xagorarakis · 20 November 2021

Please read the academically published paper before you give a downvote. Thanks!

Emmanuel Xagorarakis · 21 November 2021

Here it is in pdf.
“The Singularity Algorithm of Human Vs Computer and the Binary Code for the Quantum Computer”
Click to access Xagorarakis_Decimal%20System-Singularity(5).pdf
From the proud Greece,
E. Xagorarakis

Emmanuel Xagorarakis · 22 November 2021

I really don’t think I have many downvotes since I’m the outcast here. Immortality and the algorithm of it; go figure...

Emmanuel Xagorarakis · 25 November 2021

I somehow enjoy getting downvotes here. Thanks!

Paul Jung · 19 November 2021

I’m glad that the Gaussian distribution made the cut. It’s apparently as important as cos(x) and more important than sin(x). By the way, that part in korean in the middle was saying quadrant 1,2,3,4...

Anonymous · 19 November 2021

Stupid. A bunch of jerks jumping up and down. It is not music, it is not math.

> **Anonymous** · 19 November 2021
>
> Someone is sad and jealous

Anonymous · 19 November 2021

I hope that this post is meant to be only a joke.

Trivia · 20 November 2021

Very mature

> **Anonymous** · 21 November 2021
>
> Exitement = maturity

Edgawliet · 22 November 2021

This is an outstanding move from professor Terence Tao. But for me personally, it cannot beat this:

Aditya Guha Roy · 22 November 2021

There is also a music band by the name “Axiom of Choice”. Although I did not hear many songs by them but the ones’ I heard I could not relate to the axiom of choice or anything related to axiomatic set theory, but I think there should be some connection or some musician was just too excited by the axiom of choice and started a music band by this name. https://en.wikipedia.org/wiki/Axiom_of_Choice_(band)

domotorp · 23 November 2021

Not sure where to post this, but apprently google stole your tab name:
chrome://whats-new/

Emmanuel Xagorarakis · 25 November 2021

Would you consider a free ebook of mine, on the Foundations of Mathematics:
http://www.saitabooks.eu/2015/01/ebook.134.html?m=1
It is ground-braking.

> Thanks for downvoting.

Anonymous · 26 November 2021

Which kind of excitement is really needed to study mathematics?

lincui · 27 November 2021

Hey, Terence. Being a mathematics professor at UCLA is so lucrative.
I dream of having as much knowledge as you do, then I will have plenty of money.
I grew up in a destitute family which even cannot provided me enough food in my childhood.
How I wish I could understand advanced mathematics as you do…
Knowledge is money…

lincui · 27 November 2021

Hey, Terence. How can I understand as much of mathematics as you do?
My parents' yearly income totally is less than 15,000 dollars.
If I can become a mathematics professor at Yale University, I will earn at least 150,000 dollars per year.
Which is ten times as much as my parents' total income…
I cannot wait having a Ph.D degree in mathematics and to get income from mathematics knowledge…

> **Anonymous** · 27 November 2021
>
> keep dreaming!

CUILIN · 27 November 2021

Terence, I have an old friend who was born in 1953 and who has a Ph.D degree in philosophy from Harvard. I dream of having a Ph.D degree from schools like Harvard as well. But not in humanities, I want to have a Ph.D degree in mathematics…

CUI LIN · 27 November 2021

Hey, Terence. My life ambition is to be 3 times more intelligent and more knowledgable than you. I will give up all my life enjoyments and pleasures in order to realize this dream and ambition…

> **Anonymous** · 27 November 2021
>
> You will never pass Terry, even if you are a cat with nice lives. Intelligence and knowledge can't be quantified.

From one math educator to another could you follow my math education YouTube channel @MyMathYourMath

Anonymous · 11 December 2021

Russia turned off its internet for the months of June/July to test out a new Chinese/Iranian style firewall. Now it's demanding that all of the major US technology companies relocate an HQ to Russia. It's not correct to let Russia dictate US behavior by showing a weapon. Game theorists, begin calculating!

wenhan xie · 27 December 2021

Dear Professor tao， what do you think of Bourbaki?

Anonymous · 11 June 2025

Hello, you've made a song named Giga Society, is it possible to get it somewhere ?
[Contrary to some information on the internet, I have no connection with this song. -T]
