Very nice docu by **Pavel Etingof.** Highly recommended, not only for young mathematcians.

John M · 7 November 2026

i found the distinction Atoosa makes between the checklist and the generative encounter of mathematical progress genuinely interesting.

Pecunia Non Olet · 7 November 2026

Taking up the invitation: a short essay of mine (in Spanish) starting from the globe-of-knowledge image in the Fridman conversation with Kontorovich, Moitra and Brunton. It leaves aside whether AI stays inside the convex hull and asks the demand side: as producing knowledge gets cheaper, new problems come into view, and with them goods and wants we did not know we had. A demand story, not a rebound story.

One wish to those who bomb me with “thumbs done”. Please write instead why you do not like my comments. Or are you simply fed up with the situation and look for any target to express your uncomfort?

> > Starting on August 09, 2025, I have been working seriously wih Chatgpt several hours per day. And i had never been so fullfilling. And I have come in contact and exchange with several “old School Mathematicians”. they do not touch AI tools on math, but help me with their arguments and also get input from the AI answers to me.

Examples: Biil Duke in Jan 26, Gunnar Brinkmann since March 26, Janos Pintz since July 26, ... If other strong old-schoolers want to give it a try, simply mail me. You do no have to touch the AI bots by yourself.

My address is ingo.althoeferSENIORuni-jena.de

You know what you have to substitute.

old-bielefelder · 12 November 2026

Something nice happened. I got exactly one email feedback, from an age 60+ mathematician, who does not want to touch AI systems. He had looked at recursion a(1) = 1, a(n+1) = a(n)/n + n/a(n) for n >= 1 and asked for (almost) exact asymptotics. the answer of Astra helped him a lot.

Anonymous · 9 November 2026

Since you ask, my guess is that in this particular case you praised the work of Etingof, who is an Anthropic consultant. People are beginning to understand the industry networks.

Anonymous · 9 November 2026

One can see this explicitly in the comments following Etingof's post in P\&P.

old-bielefelder · 10 November 2026

I did not know about his relation. But independently, his comments and proposals for "Math with AI" are well founded.

Pavel Etingof · 8 November 2026

I recently also wrote this one: https://math.mit.edu/~etingof/profnorms.pdf
